**Unholy Grails** Nick Radge, 2012-03-05 What's the fastest way to lose money? Follow the herd. Nick Radge stopped following the herd many years ago. As a trader and stock broker, Nick learnt to recognise what the herd were doing and how they react to financial information. He also realised that it made no sense. Are you one of the herd? Here's a test: If a stock's price is falling do you think it represents good value, i.e. it's cheap? OneTel and HIH were not cheap when they eventually delisted in 2001. ABC Learning was not cheap when it delisted in 2008. How about Bear Sterns, Lehman Brothers, Trump Entertainment or Kodak? Billabong does not look cheap at the moment! A stock price in motion tends to stay in motion; Unholy Grails will show you how to be on the positive side of this statement. Nick Radge is focused on momentum investing; purchasing stocks that are trending up. Nick shows you how to hitch a ride on stocks in an uptrend or protect your capital during sustained bear markets. Unholy Grails goes against almost everything your stock broker, financial planner and your fund manager will ever tell you. Considering that in 2008 capital managed by fund managers dropped up to 50% we are in desperate need of an alternative way of thinking. In Unholy Grails, Nick Radge details a road less travelled; a compilation of practical strategies for investors looking for long term gains with minimum daily effort. "I am shocked that so many Mum and Dad investors were financially and emotionally battered during the GFC. The financial planners and fund managers they were relying on for advice gave them no advice: just the same old 'buy and hold' strategy that simply does not work in a collapsing market. In Unholy Grails I define specific strategies for investors, allowing them to manage their own investments and stop paying fees to financial planners and advisors," said the author, Nick Radge. Whether investing for your retirement or using an active investment strategy to manage your personal wealth, Nick Radge examines and tests numerous investment strategies to help determine the right one for you. Don't expect the same old, worn out advice from Nick Radge. His latest book is not called Unholy Grails for nothing!

An ideal investment strategy for people who work full time but are actively planning for their retirement. Weekend Trend Trader is designed for and tested on the US stock Market. The Weekend Trend Trader strategy is a turnkey strategy that uses no discretion. Because the rules are strictly and mathematically defined we are able to back test the strategy on historical data. This enables us to understand the strategy's nuances and therefore better understand how the journey to success will be travelled. The strategy is a combination of several tools that: \* ensures you will always be aligned with the trend of the broader market \* enters positions at specific points and with reasonable confirmation \* manages existing positions with a trailing stop loss \* defends existing positions if the trend of the broader market reverses \* outlines how much to invest in each position. We will fully step through each of these points in detail and slowly build the system from the ground up.

The Profitability of a Combined Signal Approach Lim Kai Jie Shawn, 2013 This article looks at the profitability of a trading rule based on Bollinger bands applied over 1995 to 2012 in 6 different equity markets using large-cap indices (CAC, DAX, FTSE, HSI, KOSPI, NIKKEI). In addition, we also explore the performance of a trading strategy based on a combined signal approach, with Bollinger band signals filtered using the ADX to avoid trending markets. While the trading strategy based solely on these indicators would underperform a buy and hold strategy in most of the markets studied, we find evidence supporting the use of Bollinger bands for tactical trades over short time horizons as evidenced by return distributions with a strong positive skew. When comparing the performance of Bollinger bands with the strategy augmented by the ADX, we find little performance improvement when applied on a systematic basis as an initial filter. However, the ADX can still act as a useful tool when applied on a discretionary basis to limit losses.

**Techniques for Mastering Bollinger Bands** Andrew Abraham, 2013-03-08 Table of Contents Introduction Day Trading Bollinger Bands Bollinger Bands with RSI Support & Resistance with Bollinger Bands Trend Breakouts with Bollinger Bands Trading Bollinger Bands in a Portfolio Following Trading Plan Risk & Money Management Hypothetical Example of a Portfolio Introduction John Bollinger developed the concept of Bollinger bands in the 1980s. Bollinger bands are volatility bands placed above and below a moving average with a multiple of a standard of deviation. The length of this moving average can vary depending on the time frame of the trader and the sensitivity. The standard for position sizing (daily bars) is generally 20 periods. However for day trading it is suggested to be much less. It can be as little as 10 periods. This is something the individual trader can test depending on their own personal preferences. Volatility is based on the standard deviation, which changes as volatility increases and decreases. The bands automatically widen when volatility increases and narrow when volatility decreases. The robustness of the Bollinger bands makes this indicator applicable to all time frames and all markets. The tightening of the bands is often used by traders as an early indication that the volatility is about to

increase sharply. The closer the prices move to the upper band, the more overbought the market becomes, and the closer the prices move to the lower band, the more oversold the market becomes. However markets can stay overbought and oversold for long periods of time. In this short ebook we will discuss various ways in order to use Bollinger bands as far as 1. Day Trading using Bollinger Bands2. Oversold & Overbought with RSI Reversals3. Support and Resistance4. Breakout Potentials5. How to build a Trend Following Portfolio
